

Clinsight Expert Directory — Assignment Feedback

Candidate: **Ishika Verma**

Overall outcome

Bugs correctly fixed: 4 / 8. The most disciplined engineering process of the three and clearly your own, hand-written work. The main gap is depth of testing — several of the most visible bugs were missed.

Bug-by-bug results

Assessed against the 8 planted bugs. Both planted red herrings (the “No rating yet” label and the `// HACK` seniority comment) were correctly left untouched.

Bug	Description	Outcome
B1	Case-sensitive search	Fixed
B2	Header shortlist count never updates	Fixed
B3	Form error doesn't clear after fix	Mis-fixed
B4	Pagination repeats an item between pages	Fixed
B5	Sort-by-rating is ascending (worst first)	Missed
B6	Specialty filter substring match	Missed
B7	Accepts bad email / negative years	Fixed
B8	Average rating inflated (off-by-one)	Missed

What went well

- Excellent git hygiene: 10 small, single-purpose commits spread across the working day — a clear, honest test→fix→commit rhythm.
- Minimal, surgical diffs that are easy to review.
- Broadest QA thinking in the notes: tested combinations (search+filter, filter+pagination) and recorded behaviours that were fine, which is genuinely useful.
- Both red herrings were left untouched.

Areas to improve

- Missed three of the most visible bugs: B5 (worst-rated experts shown first), B8 (ratings displaying above 5), and B6 (specialty filter). These are spottable just by clicking around.
- B3 was not really fixed — live validation was removed entirely rather than making the error clear once a field is corrected, which also removes useful user feedback.
- Introduced a broken/unused import (toLowerCase from 'zod/v4') — likely an accidental IDE auto-import that should have been caught before committing.
- Added shortlist persistence, which was not requested (the shortlist is intentionally session-only).
