

Clinsight Expert Directory — Assignment Feedback

Candidate: Shruti Singh

Overall outcome

Bugs correctly fixed: 5 / 8. The best raw bug-finding instinct of the three — the only candidate to catch the trickiest bug. Let down by follow-through and presentation rather than ability.

Bug-by-bug results

Assessed against the 8 planted bugs. Both planted red herrings (the “No rating yet” label and the *// HACK* seniority comment) were correctly left untouched.

Bug	Description	Outcome
B1	Case-sensitive search	Fixed
B2	Header shortlist count never updates	Found, not fixed
B3	Form error doesn't clear after fix	Missed
B4	Pagination repeats an item between pages	Fixed
B5	Sort-by-rating is ascending (worst first)	Found, misjudged
B6	Specialty filter substring match	Fixed
B7	Accepts bad email / negative years	Fixed
B8	Average rating inflated (off-by-one)	Fixed

What went well

- The only candidate to catch B6 (specialty filter returning “Pediatric Cardiology” under “Cardiology”) — that requires careful testing, not just clicking.
- Correctly fixed the harder rating and pagination bugs, with clear before/after explanations in the notes.
- Changes were minimal and focused on the actual bugs.
- Both red herrings were left untouched.

Areas to improve

- Reported the shortlist-count bug (B2) but did not fix it — found bugs should be carried through to a fix.
- Observed the ascending rating sort (B5) but marked it “not a bug” — a judgement miss; lowest-rated-first is incorrect for a directory.
- Missed B3 (form error not clearing after a field is corrected).
- Presentation needs work: FLOW_NOTES still contains template placeholders (e.g. <Shruti Singh>), a broken table layout, and an unrelated package-lock.json change slipped into the commit.
